

BeamViewer

Cognitive Radio Network Visualized

Have you ever wondered what invisible wireless signals **look** like in action?

With BeamViewer, you can do that, and much more.

What is BeamViewer?

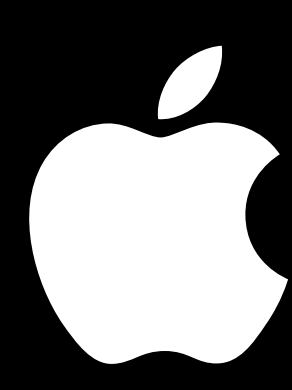

BeamViewer is a real-time mobile Augmented Reality framework for visualization and interactions with wireless network activities.

BeamViewer leverages the powers of:

- Mobile computer vision
- 3D interactive game play
- Web technologies
- Cognitive radio networking

BeamViewer provides **immediate insights** into wireless network dynamics and enables hybrid **cloud-based** and **mobile-based** network management.
